

**The BF24-T & BF230-T fire/smoke actuators have now been superseded by the:-  
BF24-TN & BF230-TN**

The only changes between the old and new products is the shape and test operation of the built in thermal fuse.

The old BF24-T & BF230-T actuators have a round fuse housing and a toggle switch to enable testing of the actuator.

The New BF24-TN & BF230-TN actuators have squarer shape housing and a push button to enable testing of the actuator.

All other aspects and functions of the BF actuators remains the same.

**NEW**

**OLD**

If you require any technical help with the above please contact MHServices for further information.
